How to Complete Telecom Verification and Bank Verification

1. **Telecom Verification**

Dear Applicant, if you are applying for a PAN-based DSC on Pantasign, after filling in your application details and submitting the application, you must complete the telecom verification. For telecom verification, your mobile number must be registered in the applicant’s name. You will receive an OTP from your telecom service provider, and you need to enter the same OTP in the telecom verification section. Once the OTP is successfully validated, your telecom verification will be completed.

2. **Bank Verification**

Dear Applicant, if you are applying for a PAN-based DSC on Pantasign, after filling in your application details and submitting the application, you will see an option for bank verification under the telecom verification section. In this option, you must enter your bank account number and IFSC code and click on 'Verify'. A small amount will be credited to your bank account. You must enter this exact amount in the verification field. Once the amount is verified, your bank verification will be completed. Please note that the DSC applicant’s name and the bank account holder’s name must be the same for successful bank verification.
